U.S. Patent No. 5,720,139, issued on February 24, 1998 to Sorkin, teaches an anchoring apparatus for a multi-strand anchorage system including an anchor plate having a front side and a back side, a plurality of tendon-receiving passageways formed in the anchor plate, and a hole formed in the anchor plate and extending so as to open on front side and a back side of the anchor plate. Each of the tendon-receiving passageways opens on the front side and opens on the back side of the anchor plate. Each of the tendon-receiving passageways tapers so as to have a narrow diameter adjacent the back side of the anchor plate and a wide diameter adjacent the front side of the anchor plate. The hole is an unmachined cast hole.

U.S. Patent No. 5,701,707, issued on December 30, 1997 to Sorkin, discloses a transition apparatus for a bonded slab post-tension system including a diverter member having a first end and a second end and a tendon port support affixed to the second end of the diverter member. The first end of the diverter member is attached to a duct. The tendon port support has a plurality of tendon ports opening at an end opposite the diverter member. The second end of the diverter member has a greater area than the first end. Each of the tendon ports is of a tubular configuration opening at one end to an interior of the diverter member. A plurality of tubular member are affixed to the plurality of tendon ports and extend outwardly therefrom. A plurality of anchors are attached to the plurality of tubular members at an end opposite to the plurality of tendon ports.

U.S. Patent No. 5,072,558, issued on December 17, 1991 to Sorkin et al., describes a tendon tensioning anchor comprising a base member having a tubular section extending therefrom, a plastic encapsulation in surface-to-surface contact with the exterior of the base member, and a heat shield fastened within the plastic encapsulation adjacent an end of a tubular section extending outwardly from the base member.
